Guide: NAME-1  
Co-guide: NAME-2

11th June 2025

# Outline

- 1 Motivation and Introduction
- 2 Research Objective 1: Text goes here....
- 3 Research Objective 2: text goes here....

- 1 Motivation and Introduction
- 2 Research Objective 1: Text goes here....
  - Previous research
  - Data sources and data curation
  - Results and Evaluation metrics
- 3 Research Objective 2: text goes here....
  - Theoretical foundations
  - Previous research

- A thesis or dissertation is a document submitted in support of candidature for an academic degree or professional qualification presenting the author's research and findings.
- The size of the Thesis shall be normally between 100 and 350 pages of typed matter reckoned from the first page of Chapter 1 to the last page of the thesis excluding reference section.

- 1 Motivation and Introduction
- 2 Research Objective 1: Text goes here....
  - Previous research
  - Data sources and data curation
  - Results and Evaluation metrics
- 3 Research Objective 2: text goes here....
  - Theoretical foundations
  - Previous research

In the preparation of the manuscript, care should be taken to ensure that all textual matter is typewritten to the extent possible in the same format as may be required for the final Thesis.

A literature review is a survey of scholarly sources on a specific topic. It is often written as part of a thesis, dissertation, or research paper, in order to situate your work in relation to existing knowledge.

# Data sources and data curation

Data curation is the process of collecting, organizing, describing, preserving, and sharing data for future use. It is an important part of data management, and it helps to ensure that data is accurate, accessible, and useful.

Results and evaluation metrics are two important concepts in data science and machine learning. Results are the outputs of a model or algorithm, while evaluation metrics are used to measure the performance of a model or algorithm.

  - Data sources and data curation
  - Results and Evaluation metrics
- 3 Research Objective 2: text goes here....
  - Theoretical foundations
  - Previous research

## Another Slide....

There are a number of different evaluation metrics that can be used, depending on the specific problem that is being solved.

Overall, results and evaluation metrics are important concepts in data science and machine learning. They help to ensure that the models and algorithms are performing as expected...
